Toyota Production System (TPS) is a manufacturing system that aims to maximize efficiency and quality. It consists of several key components: Just in Time (JIT), Jidoka, Standardized Work, and Stability. JIT focuses on continuous flow, takt time, and a pull system. Jidoka emphasizes built-in quality, error proofing, and separating human and machine work. Standardized Work ensures consistency in production processes. Stability is the foundation of the system, ensuring that production is reliable and predictable.

The S.M.A.R.T. goal formula is a framework for setting effective goals. It stands for Specific, Measurable, Attainable, Relevant, and Time-bound. Each component has a specific purpose: Specific goals are clearly defined; Measurable goals can be quantified; Attainable goals are realistic; Relevant goals are important; and Time-bound goals have a clear deadline.

Production Device

KRAUSS MAFFEI

Finehope has successively introduced many of the world's most advanced German KraussMaffei high-pressure injection machines since 2010.

Reaction Injection Molding (RIM) High Pressure Machine KRAUSS MAFFEI Made in Germany!

Self-invented fully automatic production line

Finehope has independently developed a number of fully automatic P-U injection production lines since 2010. These production lines reduce production costs and meet customer delivery requirements.

Welding Robots

Since 2016, Finehope has continued to purchase welding robots and automatic fixture turntables for welding metal parts. The independent processing of accessories saves the waiting time and procurement cost of outsourcing processing.

CNC Machine

Finehope has continued to purchase CNC equipment since 2016. CNC (Computer Numerically Controlled) machining is a manufacturing process in which pre-programmed computer software dictates the movement of factory tools and machinery. Using this type of machine versus manual machining can result in improved accuracy, increased production speeds, enhanced safety, increased efficiency and most importantly, help customers save costs and improve product quality.

Mould Release Agent Painting Robot

Since 2019, Finehope has purchased robots for spraying water-based release agents to improve the working environment, improve spraying quality and material utilization, and reduce labor costs.

3D printer

Finehope started to purchase 3D printers in 2015. 3D printing can realize rapid proofing of new product prototypes and templates for resin molds, and can also be used for faster and cheaper small batch production.
